**JUSTIFICATION:** Southeast Alaska wild stock king salmon are experiencing a period of poor productivity. Southeast Alaska king salmon escapements from 2016 to 2024 have been below the lower bounds of escapement goals for many of the eleven monitored king salmon indicator systems and this trend of low productivity is expected to continue in 2025. While some improvement in achieving king salmon escapement goals was observed in 2024, conservative management measures continue to be warranted. This emergency order implements management measures designed to conserve Southeast Alaska wild stock king salmon and comply with international obligations to conserve king salmon originating from transboundary rivers. This emergency order also implements management measures prescribed by the *2025 Taku and King Salmon Rivers Chinook Salmon Stock Status and Action Plan* and the *2021 Stikine River and Andrew Creek King Salmon Stock Status and Action Plan*.

**PREVIOUS EMERGENCY ORDERS AFFECTED:** Emergency Order 1-KS-C-06-25, which established sport fishing regulations for king salmon in areas where Alaska hatchery-produced king salmon will be returning near Petersburg, is unaffected by this emergency order.

Emergency Order 1-KS-R-08-25 established the regional bag, possession and annual limits for the Southeast Alaska king salmon sport fishery for the 2025 season and remain unaffected outside of the conservation measures specified by this emergency order.

**DISTRIBUTION:** The distribution list for this emergency order is on file at the Region 1 Office of the Alaska Department of Fish and Game, Division of Sport Fish, P. O. Box 110024, Douglas, AK 99811, (907) 772-5231.
