2022 HAWK INLET TEST FISHERY UPDATE # 4

The department conducted the fourth and final 2022 Hawk Inlet shoreline test fishery on Saturday, July 16. Comparing the total harvests for the day to the 10-year average total harvests, all species of salmon were above average, except for coho salmon. For the approximate date, the pink salmon harvest was 113% of the 10-year average and 251% of the recent even-year average. The sockeye salmon harvest was 134% of the 10-year average and the chum salmon harvest was 101% of the 10-year average.

The pink salmon sex ratio was 71% male, above the average of 53% male for previous year's test fisheries conducted on or around this date.

*The July 8 test fishery harvests were updated from the previous estimates with fish ticket numbers.
