

2020 ANNUAL MANAGEMENT PLAN
Eklutna Salmon Hatchery
Cook Inlet Aquaculture Association

1.0 Executive Summary

1.1 Introduction

This Annual Management Plan (AMP) plan is prepared to fulfill the requirements of 5 AAC 40.840. This plan must organize and guide the hatchery's operations, for each calendar year, regarding production goals, broodstock development, and harvest management of hatchery returns. Egg take through release details are included in planning for succeeding calendar years. In season assessments and project alterations by Cook Inlet Aquaculture Association (CIAA) or Alaska Department of Fish and Game (ADF&G) may result in changes to this AMP in order to reach or maintain program objectives. CIAA will notify the ADF&G private nonprofit (PNP) hatchery program coordinator in a timely manner of any departure from the AMP. The ADF&G PNP coordinator will advise as to whether an amendment, exception report, or other action is warranted. No variation or deviation will be implemented until an AMP amendment has been approved or waived by both the department and CIAA. This policy applies to all hatchery operations covered under the AMP.

1.2 New This Year: (production, harvest management, culture techniques, etc.)

1.2.1 Facility Changes

As part of the renewal of the land lease from the Department of Natural Resources (DNR), CIAA has performed a land survey and will perform an appraisal. The deadline for completing these tasks has been extended to June 30, 2020 due to circumstances beyond CIAA's control. Conditional approval received from the Mat-Su Borough. Minor work to be performed.

CIAA will continue to investigate options for restoring fish production at this facility. New development plan is in process to be presented to DNR upon completion.

Significant structural damage occurred from the November 30, 2018 earthquake. The damage is currently under review by state and federal agencies. Multiple rejections received, additional appeal filed.

1.2.2 Production Changes

No changes to production at this facility are anticipated this year.

1.2.3 Fish Culture Changes

No changes to production at this facility are anticipated this year.

1.2.4 Projected Return and Cost-recovery Changes

CIAA fish production at this facility has been suspended since 1998. No fish produced by CIAA operations are expected to return. ADF&G does use the Eklutna tailrace for acclimation and release of coho and king salmon as described in the William Jack Hernandez Sport Fish Hatchery annual management plan.

1.3 Fish Transport Permits or Amendments Needed This Year

No CIAA fish production at this facility is anticipated this year. No amended or new fish transport permits (FTPs) are necessary.

1.4 Expected Return

CIAA fish production at this facility has been suspended since 1998. No fish produced by ESH are expected this year.

1.5 Production Summary

1.6 Permitted Capacity

ESH operates under Private Nonprofit Permit #17 issued in 1982 and has a permitted capacity of 18,000,000 sockeye salmon eggs and 160,000 coho salmon eggs.

1.7 Project Evaluation

CIAA fish production at ESH has been suspended since 1998. No CIAA fish evaluation projects are planned for this year.

2.0 Resurrection Bay Sockeye Salmon

2.1 Purpose and History

The purpose of this program to provide emergency rearing space if water conditions at TLH are determined to be insufficient for rearing of the Resurrection Bay sockeye salmon smolt program as defined in TLH Basic Management Plan.

2.2 Operational Plan

2.2.1 Egg-take Goal/Brood Sources

Not applicable. Will take place under TLH Basic Management Plan.

2.2.2 Egg Take; Transport of Eggs

Not applicable. Will take place under TLH Basic Management Plan.

2.2.3 Incubation Plans

Not applicable. Will take place under TLH Basic Management Plan.

2.2.4 Rearing and Release Plans

CIAA does not anticipate having to use ESH to rear Resurrection Bay sockeye salmon this year. However, if water availability becomes critical at TLH, an amendment to this AMP may be made.

2.3 Donor Stock Management

2.3.1 Management Strategies

Not applicable. Will take place under TLH Basic Management Plan.

2.3.2 Escapement Requirements

Not applicable. Will take place under TLH Basic Management Plan.

2.4 Evaluation Plans

Not applicable. Will take place under TLH Basic Management Plan.

3.0 Big Lake Sockeye Salmon

3.1 Purpose and History

The purpose of this program to provide emergency rearing space if water conditions at TLH are determined to be insufficient for the rearing of the Big Lake sockeye salmon smolt program as defined in TLH Basic Management Plan.

This program has been suspended in the TLH Basic Management Plan. Should the need arise to resume this program, this AMP may be amended to include the operational plan, donor stock management, and evaluation plans.

4.0 Eklutna Tailrace Sockeye Salmon

4.1 Purpose and History

CIAA initiated this project in 1992 when fry were transferred from Big Lake Hatchery for rearing to smolt and released to the Eklutna tailrace in 1993.

The purpose of the project was to provide sockeye salmon to the Upper Cook Inlet (UCI) drift and set gillnet commercial fisheries, and to provide for a cost-recovery harvest at the ESH. Returns of adult fish from smolt releases were generally less than expected. Fish returning to the hatchery were available for cost-recovery harvest, but were of poor quality.

The Eklutna tailrace sockeye salmon smolt release project was suspended after the 1998 smolt release. No egg takes, smolt releases, or adult returns are projected this year. Should the need arise to resume this program, this AMP may be amended to include the operational plan, donor stock management, and evaluation plans.

5.0 Eklutna Tailrace Coho Salmon

5.1 Purpose and History

CIAA initiated this project in 1984 with a small coho salmon smolt release to Cottonwood Creek. The project was moved to the Eklutna tailrace in 1985.

The purpose of the project was to provide coho salmon to the Knik River recreational fishery. Returning coho salmon were also caught in the UCI commercial set and drift gillnet fisheries and harvested by CIAA for cost recovery.

The Eklutna tailrace coho salmon smolt release project was suspended after the 1998 smolt release. No egg takes, smolt releases, or adult returns are projected in this year. Should the need to revive this program from suspension this year, this AMP may be amended to include the operational plan, donor stock management, and evaluation plans.

6.0 Approval

Recommendation for Approval: Eklutna Salmon Hatchery Annual Management Plan, 2020

Dean Day, Executive Director, Cook Inlet Aquaculture Association 6/24/2020

Matt Miller, Fish and Game Coordinator, Division of Sport Fish 7/7/2020

Glenn Hollowell, Area Management Biologist, Division of Commercial Fisheries 7/7/2020

Tom Vania, Regional Supervisor, Division of Sport Fish 7/7/2020

Bert Lewis, Regional Supervisor, Division of Commercial Fisheries 6/24/2020

Ethan Ford, Regional Resource Development Biologist, Division of Commercial Fisheries 7/7/2020

Lorraine Vercessi, PNP Hatchery Program Coordinator, Division of Commercial Fisheries 6/29/2020

The 2020 Eklutna Salmon Hatchery Management Plan is hereby approved:

Tom Taube, Deputy Director, Division of Sport Fish 7/8/2020

Peter Bangs, Assistant Director, Division of Commercial Fisheries 7/9/2020
