

PROPOSAL 82

5 AAC 47.055. Southeast Alaska King Salmon Management Plan.

Amend the *Southeast Alaska King Salmon Management Plan* to align with the provisions of the 2019–2028 Pacific Salmon Treaty annex, as follows:

5 AAC 47.055 is amended to read:

5 AAC 47.055. Southeast Alaska King Salmon Management Plan

(a) The commissioner shall establish, by emergency order, the king salmon sport fish bag and possession limits and all other necessary management measures based on the Southeast Alaska winter troll fishery catch per unit effort (CPUE). The bag and possession limits and other management measures established by the commissioner will remain in effect until January 31 of the following year. If the new Southeast Alaska winter troll fishery CPUE is not available by February 1, the bag and possession limits and other management measures for the remainder of the year will be based on the prior year's Southeast Alaska winter troll fishery CPUE, unless superseded by emergency order.

(b) The objectives of the management plan under this section are to

(1) manage the sport fishery to attain an average harvest of 20 percent of the annual harvest ceiling specified by the Pacific Salmon Commission, after the subtraction of the commercial net allocation specified in 5 AAC 29.060 from the harvest ceiling;

(2) allow uninterrupted sport fishing in salt waters for king salmon, while not exceeding the sport fishery harvest ceiling;

(3) minimize regulatory restrictions on resident anglers; and

(4) provide stability to the sport fishery by eliminating inseason regulatory changes, except those necessary for conservation purposes **or achieving the sport harvest allocation.**

(5) at Alaska winter troll fishery CPUEs less than 6.0 and equal to or greater than 2.6; a resident bag limit of two king salmon 28 inches or greater in length will be established in areas where conservation management measures for all anglers prohibited king salmon retention or closed fishing for king salmon once they reopen.

(6) at Alaska winter troll fishery CPUEs less than 6.0 and equal to or greater than 2.6; and the department projects that the king salmon sport harvest allocation is going to be exceeded, the department shall, by emergency order, adjust the nonresident seasons and bag limits so to stay within the sport allocation; the department shall prohibit resident king salmon retention or close the resident sport king salmon fishery only if nonresident angler closures are insufficient to remain within the sport fishery allocation.

(7) at Alaska winter troll fishery CPUEs less than 2.6 and equal to or greater than 2.0; and the department projects that the king salmon sport harvest allocation is going to be exceeded, the department shall, by emergency order, adjust the nonresident seasons and bag limits so that there are no closures for residents.

(c) When the Southeast Alaska winter troll fishery CPUE is equal to or greater than 20.5, which is equivalent to a king salmon abundance index greater than 2.2, the sport fishery harvest limit will be 69,000 treaty king salmon, and the commissioner may, by emergency order, implement the following management measures:

(1) a resident bag limit of three king salmon, 28 inches or greater in length;

(2) a nonresident bag limit of two king salmon in May and one king salmon in other months; a nonresident annual limit of five king salmon, 28 inches or greater in length;

(3) from October 1 through March 31, a sport fish angler may use two rods when fishing for king salmon; a person using two rods under this paragraph may only retain salmon.

(d) When the Southeast Alaska winter troll fishery CPUE is less than 20.5 and equal to or greater than 8.7, which is equivalent to a king salmon abundance index of less than or equal to 2.2 and greater than 1.8, the sport fishery harvest limit will be 61,900 treaty king salmon, and the commissioner may, by emergency order, implement the following management measures:

(1) a resident bag limit of three king salmon, 28 inches or greater in length;

(2) a nonresident bag limit of one king salmon; a nonresident annual limit of four king salmon, 28 inches or greater in length;

(3) from October 1 through March 31, a sport fish angler may use two rods when fishing for king salmon; a person using two rods under this paragraph may only retain salmon.

(e) When the Southeast Alaska winter troll fishery CPUE is less than 8.7 and equal to or greater than 6.0, which is equivalent to a king salmon abundance index less than or equal to 1.8 and greater than 1.5, the sport fishery harvest limit will be 49,300 treaty king salmon, and the commissioner may, by emergency order, implement the following management measures:

(1) a resident bag limit of two king salmon, 28 inches or greater in length;

(2) a nonresident bag limit of one king salmon; a nonresident annual limit of three king salmon, 28 inches or greater in length;

(3) from October 1 through March 31, a resident sport fish angler may use two rods when fishing for king salmon; a person using two rods under this paragraph may only retain salmon.

(f) When the Southeast Alaska winter troll fishery CPUE is less than 6.0 and equal to or greater than 3.8, which is equivalent to a king salmon abundance index of less than or equal to 1.5 and greater than 1.2, the sport fishery harvest limit will be 37,900 treaty king salmon, and the commissioner may, by emergency order, implement the following management measures: [IN CONJUNCTION WITH WILD STOCK MANAGEMENT MEASURES:]

(1) a resident bag limit of one king salmon, 28 inches or greater in length;

[(5) IF THE DEPARTMENT PROJECTS THAT THE KING SALMON SPORT HARVEST ALLOCATION IS GOING TO BE EXCEEDED, THE DEPARTMENT SHALL, BY EMERGENCY ORDER, ADJUST THE NONRESIDENT SEASONS AND BAG LIMITS SO THAT THERE ARE NO CLOSURES FOR RESIDENTS.]

(i) When the Southeast Alaska winter troll fishery CPUE is less than 2.0, which is equivalent to a king salmon abundance index of less than 0.875, the all gear catch limit will be determined by the Pacific Salmon Commission, and the commissioner may, by emergency order, implement the provisions specified in (g) and (h) of this section and nonretention periods or other restrictions for resident and nonresident anglers to obtain 20 percent of the harvest reduction from resident anglers and 80 percent from nonresident anglers.

(j) The commissioner may adopt regulations that establish reporting requirements necessary to obtain the information required to implement the management plan under this section.

(k) The commissioner may, by emergency order, establish that the nonresident harvest and annual limits for king salmon under this section do not apply in a hatchery terminal harvest area.

What is the issue you would like the board to address and why? The Southeast Alaska King Salmon Management Plan (SEAKKSMP; 5 AAC 47.055) triggers sport fishery management actions to maintain harvest within the sport fishery harvest limit allocation. In August 2018, the Pacific Salmon Commission reached agreement to renew various fishery arrangements under the Pacific Salmon Treaty (PST) for the next ten years (2019-2028). Under the current PST, seven harvest limit tiers replaced the harvest limit ranges and established annual payback provisions when the all gear harvest ceiling is exceeded by Alaskan fisheries. Since the renewed 2019-2028 PST agreement reduced the harvest limit at specified abundance indices, managing the sport fishery under the then current plan would have likely caused the sport fishery to exceed its allocation more often and by a greater amount.

Recognizing that the sport fishery would exceed its allocation more often and by a greater amount without modification of the plan, the department submitted an agenda change request during the 2018/2019 Alaska Board of Fisheries cycle, which the board accepted and took up as Proposal 176 at the January 2019 Arctic-Yukon-Kuskokwim Finfish meeting. Proposal 176 provided a draft plan with suggested management provisions to keep the sport fishery within its allocation. Understanding that it would be best to address the plan during the 2021 Southeast Alaska board meeting but that immediate action was needed, the board modified three sections of the plan that would most likely cover the anticipated abundance indices occurring in 2019 and 2020 and adopted the proposal as amended. The newly adopted management provisions accounted for the conservative management actions being implemented in inside waters to protect Alaska wild king salmon stocks and the necessity for the sport fishery to stay within its allocation given the annual payback provisions under the new treaty provisions. This proposal adds draft management measures for these three sections

of the plan needed to keep the sport fishery within its allocation if no conservative management measures are needed to protect wild king salmon and to clarify the board's intent to manage the sport fishery in season to stay within its allocation at all abundance levels. Additionally this proposal consolidates management provisions that direct the department to establish a resident bag limit of two king salmon in areas closed for conservation of wild Alaska king salmon once they are reopened and clarifies provisions instructing the department to restrict nonresidents prior to resident anglers. It should be noted under objective (b)(1) the sport fishery is to be managed on average for its allocation but under sections (f), (g), and (h) the department is to use in season management to stay within the sport allocation of the plan.
