

**The Alaska Department of Fish and Game has identified the following errors or omissions in staff comments (RC2) for proposals 156, 193, 194, and 200.**

**Proposal 156:** This is an update and a correction to Table 156-1 in the department’s staff comments (RC2, Page 159). The revised table on the following page includes information for 2021 and 2022, which was not available at the time of publication of the RC2. The table also includes a correction to the values to the column originally labeled “Proposed Potential difference in ex-vessel value (\$US)”, below revised to “Difference in Potential Exvessel Values (\$US) from Actual GHL to Proposed GHL”. The prior values were the difference between the actual exvessel value and the potential exvessel that did not consider when the GHL was underharvested or was exceeded.

**Proposal 193:** The reference to figure 194-1 and table 194-1 should be referring to figure 193-1 and table 193-1.

**Proposal 194:** Figure 194-1 and table 194-1 should be figure 193-1 and table 193-1.

**Proposal 200:** The commercial fishery Dungeness crab fall/winter season (October 1–February 28) should be fall season (October 1–November 30) as the winter season is not open in this area.

Table 156-1. Established GHGs compared to proposed GHGs, with estimated exvessel value in the Sitka Sound commercial sac roe herring fishery, 2001-2022. Dashes indicate values are not applicable.

Year	Forecast Biomass (tons)	Harvest rate by formula in regulation	GHG by formula in regulation	Actual Target HR <sup>a</sup>	Actual GHG (tons)	Actual Harvest (tons)	Actual Average Price \$/ton	Potential Exvessel Value Based on Actual GHG and price (\$US)	Proposed harvest rate	Proposed GHG (tons)	Potential Exvessel Value (\$US) Based on Proposed GHG and actual price	Difference in Potential Exvessel Values (\$US) from Actual GHG to Proposed GHG	Proposed percent of current GHG by formula
