

**Proposal 93 Map and Graph Submitted by request of Central Kuskokwim AC  
Alaska Board of Fisheries Arctic Yukon Kuskokwim 2022-2023 Cycle**

**Figure 1.** Map of the Buckstock and Aniak Rivers. Yellow arrow to the north shows the main confluence with the Aniak River. The yellow arrow to the SE shows the proposed beginning of the closed area.

The purpose of the closure is to protect spawning salmon during low flow periods (discharges below 400 cfs.) when chum salmon are present and actively spawning, Figure 2.

**Figure 2.** Buckstock discharge (cfs), and chum salmon cumulative passage at the Salmon River weir (SRW).
