The City of Kupreanof supports Proposals 13 and 14 in light of the fact there is a declining wolf population and viable habitat necessary for maintaining sustainable yield and, viable and well distributed populations of wolves in GMU 2; ADFG has failed to fully account for wolf mortality in its management of wolves; the prospect of a Fish and Wildlife Service listing of *Canis lupus ligoni* under the Endangered Species Act Threatened and Endangered status should be avoided; wounding wolves has a high likelihood of mortality in the wild, and providing a rule to account for potential mortality is important as a disincentive (as it subtracts from the legal limit); and these proposals being necessary as a regulatory measure for responsibly managing wolves.
