

PROPOSAL 46

5 AAC 92.115. Control of predation by bears.

Establish intensive management programs for bear across the Interior and Eastern Arctic Region as follows:

Under intensive management, for other prey species harvested by hunters or in other area, the commissioner of ADF&G may authorize predation control to recover depleted prey populations under Alaska Statute 16.05.020 (2), and the Board of Game may adopt regulations for similar purpose under AS 16.05.255 either of these authorities are listed under other programs.

We, Alaskan residents that are concerned for the safety of our children, our food security, our wildlife, our resources, and sustainability for future uses, would like to recommend that the Alaska Board of Game adopt appropriate regulations that begin intensive bear management across the state for both brown and black bears.

I will leave it up to your legal teams, division staff, and board support team to work up the regulation language. I'm sure there will be modifications to add regulatory language appropriate to each Unit as this proposal circulates prior to Board of Game meeting.

I recommend that each Unit, give recommendations and modifications in assistance with the language to ensure that needs are being appropriately met throughout the state for predator control, "intensive management."

Areas of more intensive concern are the rural areas with higher subsistence economy.

We, would also like to request that you allow local residents to help with this management, because we know the demand for labor outweighs the number of employees. We are here to help at your discretion and volunteers.

What is the issue you would like the board to address and why? The goal is to reduce predation bear rates, allowing humans to take more ungulates while also maintaining sustainable populations of predators. There has been an elevated issue heard throughout the state of bears becoming a problem, in specific the brown bear. This discussion has been brought about during multiple advisory committee meetings, Federal Subsistence Regional Advisory Council meetings, and the Federal Subsistence Board.

These programs are designed to reduce predation by wolves or bears and increase moose, caribou, or deer that are a need for source of Alaska. Another species that should be added to this is salmon, if possible.

In all areas where salmon use to be the main source diet for these ungulates are now in search of food, because of the decline of salmon in the spawning grounds. Bears are moving into urban and rural communities, putting human lives at risk and their personal harvests to wonton waste.

There is an ever-growing concern, humans witnessing brown bears harvesting caribou calves at an alarming rate. Not only eyewitnesses, but videos where the brown bears are ripping out newborns

as the mothers are mid-point delivery.

Our caribou in the Western Region have flat lined and the population has not increased, which is a growing concern. Due to the decline in salmon, subsistence harvests have shifted on increasing the pressure on Caribou to fill the void. If there is not enough caribou to uphold the demand, caribou abundance is at risk to a plummeting decline.

In other regions of Alaska, folks have talked about the moose populations are also declining and they too are concerned about the brown bears hunting moose calves at an alarming rate as well. There is significant concerns about a need for intensive management control on bears.

I had offered to start a proposal through the Board of Game to address these concerns and issues. There are multiple people who are in support of this proposal across the state.
