

## **PROPOSAL 110**

### **5 AAC 92.037. Permits for falconry.**

Extend the nonresident season for acquiring passage raptors as follows:

This proposal seeks to modify the nonresident season for acquiring a passage raptor as follows:

5 AAC 92.037(g)(8). Permits for falconry.

Current regulation: The annual nonresident season for acquiring a passage raptor is from August 15th to October 31st

Proposed regulation: The annual nonresident season for acquiring a passage raptor is from September 15 to November 15.

**What is the issue you would like the board to address and why?** Change the season dates for nonresident falconers to take passage raptors by permit.

The Alaska Falconers Association (AFA) proposes to change the nonresident season dates to acquire a passage raptor to better align the time of taking with the dispersal timing of Gyrfalcons from their natal areas, and to reduce the disturbance of nesting sites especially those nest sites located north and west of the Brooks Range.

This proposal is requesting the same season date changes that the Department of Fish and Game (ADF&G) recommends in their proposal to the Board of Game on this subject.

The nonresident season dates were established in 2015 to provide opportunity to take all legal falconry species after they leave their natal area (i.e. passage bird), including smaller species that disperse in August. ADF&G records show that to date, ten Gyrfalcons and one Northern Goshawk have been taken by nonresident falconers. There appears to be little interest in taking other legal passage falconry species by nonresidents since most of those species are available in the continental United States. Further, individuals of all legal falconry species either remain in Alaska year long or remain in Alaska through mid-September and would remain available for nonresident falconers even with the change in season dates.

The following information that has been compiled by ADF&G represents data published by Gyrfalcon researchers:

Gyrfalcons depart their natal area in Alaska in early September (median=27 August, range 15 August – 6 September., n=20, Seward Peninsula and Denali National Park, McIntyre et al. 2009; median=12 September, n=2, Yukon Kuskokwim Delta; Eisaguirre et al. 2014). Current nonresident season dates allow recently fledged young that have not yet left their natal areas to be taken for approximately three weeks.

This is a conservation concern because there is substantial legal and illegal interest in obtaining white Gyrfalcon nestlings. These birds are extremely valuable through legal captive breeding and illegal falconry trades. Having a passage season for nonresident falconers that allows take at or near Gyrfalcon nests incentivizes the sharing of sensitive nest site locations as well as the

disturbance of these birds during a sensitive time in their life cycle. Further, most of this attention is focused on white birds that constitute less than 10% Alaska's Gyrfalcon population and hence, taking a conservative approach to season dates is appropriate for such a small population of birds ( $n < 100$ ) to ensure sustained yield into the future.

In addition, this proposal asks the Board of Game to extend the season dates later by fifteen days to allow additional opportunity for nonresident falconers to access transient passage Gyrfalcons migrating through road accessible areas of Western Alaska.
